Java

```java
class Solution {
  public List<Integer> maxPrimes(int n, int s) {

  }
}
```

JavaScript

```javascript
/**
 * @param {number} n
 * @param {number} s
 * @return {number[]}
 */
var maxPrimes = function(n, s) {

};
```

TypeScript

```typescript
function maxPrimes(n: number, s: number): number[] {

};
```

C++

```cpp
class Solution {
```

```
public:
  vector<int> maxPrimes(int n, int s) {

  }
};
```

C#

```
public class Solution {
  public IList<int> MaxPrimes(int n, int s) {

  }
}
```

Kotlin

```
class Solution {
  fun maxPrimes(n: Int, s: Int): List<Int> {

  }
}
```

Go

```
func maxPrimes(n int, s int) []int {

}
```
